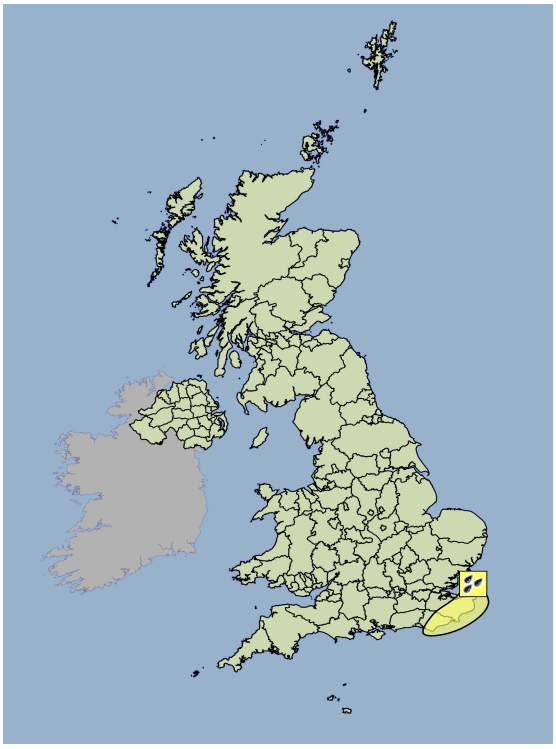
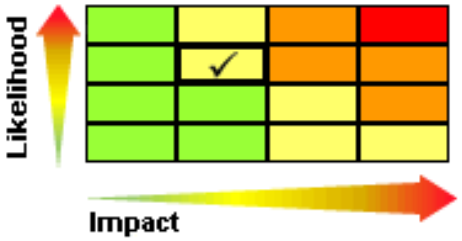
National Severe Weather Warning Service





Chief Forecasters Assessment
A slack area of flow pressure will drift slowly eastwards across southern Britain accompanied by deeply unstable air. This system is producing heavy showers over the English Channel which will continue to feed in across the extreme southeast of England, driven in on the south to southwest winds. The showers should become confined to the extreme east overnight before largely dying out on Wednesday morning.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Tue, 05th Jan 2016** until **06:00 on Wed, 06th Jan 2016**

Further bands of heavy showers will continue to affect parts of Kent and East Sussex for the rest of Tuesday and into the first part of Wednesday. The showers may give 5-10 mm of rain in an hour very locally. A further 10-20 mm is likely in places through the whole period with perhaps as much as 40 mm locally in the east. Given the saturated ground please be aware of the likelihood of local surface water flooding affecting road travel at times.
